

Magnesium CAL Checker® Standards – HI96754-11

## Description

HI96754-11 is a high quality set of calibration standards that allows users to validate and calibrate the magnesium range found in the compatible HI96752 portable pHotometer that has a 0 to 150 mg/L (ppm) magnesium range. The HI96754-11 includes one sealed “A” cuvette for zeroing the meter and one “B” cuvette that is used to validate or calibrate. The expected reading from the “B” standard is 100 ±5 mg/L magnesium @ 25°C. The calibration set is produced in our state-of-the-art manufacturing facility using reagent grade chemicals in a temperature controlled environment.

## Supplied with Certificate of Analysis

- Product code
- Lot number
- Expiration date

## Provided storage containers

- Light tight
- Protects from accidental breakage

Validation and calibration of the magnesium range for the HI96752 portable pHotometer is quick and easy with the HI96754-11 CAL Check Standards.

## Especificaciones

Paquete	Estándares sellados: 0 y 100 mg/L de magnesio
Cantidad	1 conjunto
